1958 deluxe considered a rare bus being a 15 window pressed bumper bus rather than typical 23 window sunroof, this bus showed up to my shop in late 2001. it sat a few years as storage until i could make time for it. obviously the owner was not in a rush to get it done.

The bus had been partially metalworked at another shop before i got it, i updated some work with better production metal(KlassicFab funky green panels) and finished off what was not touched at that point. i then proceeded to further the restoration into the bodywork and paint. i dont generally like to do this work but i grandfathered this bus in as i agreed to the owner back in '01 to do a full resto. stick to my word.

It is finally painted. i still need to make a few touches on the underside such as factory style overspray in the wheel wells and hit the jackpoints with red.

once that is done i will then move on to the interior. running a new wire harness, install a headliner and go from there. hopefully finish this one within the next year. hey, im only one person! when cloning becomes popular, maybe ill try that...
